

## NOTICE OF FILING

This document was lodged electronically in the FEDERAL COURT OF AUSTRALIA (FCA) on 24/12/2020 12:47:55 PM AEDT and has been accepted for filing under the Court's Rules. Details of filing follow and important additional information about these are set out below.

### Details of Filing

Document Lodged: Non-Prescribed Pleading  
File Number: VID243/2020  
File Title: KELVIN MCNICKLE v HUNTSMAN CHEMICAL COMPANY  
AUSTRALIA PTY LTD & ORS  
Registry: VICTORIA REGISTRY - FEDERAL COURT OF AUSTRALIA

Dated: 24/12/2020 12:47:59 PM AEDT

A handwritten signature in blue ink that reads 'Sia Lagos'.

Registrar

### Important Information

As required by the Court's Rules, this Notice has been inserted as the first page of the document which has been accepted for electronic filing. It is now taken to be part of that document for the purposes of the proceeding in the Court and contains important information for all parties to that proceeding. It must be included in the document served on each of those parties.

The date and time of lodgment also shown above are the date and time that the document was received by the Court. Under the Court's Rules the date of filing of the document is the day it was lodged (if that is a business day for the Registry which accepts it and the document was received by 4.30 pm local time at that Registry) or otherwise the next working day for that Registry.

## Rejoinder

No. VID 243 of 2020

Federal Court of Australia

District Registry: Victoria

Division: General

### **KELVIN MCNICKLE**

Applicant

**HUNTSMAN CHEMICAL COMPANY AUSTRALIA LTD & ORS** and others named in the Schedule

By way of rejoinder to the Reply filed on behalf of the Applicant on 25 November 2020 (**Reply**), the Third Respondent pleads as follows, adopting the defined terms from the Defence filed by the Third Respondent filed on 28 October 2020 (**Defence**), unless otherwise indicated:

1. It does not plead to the allegations in paragraph 1 as the Applicant makes no allegations against it.
2. Save to say that it refers to and repeats paragraph 35(d)(ii) of the Defence, it does not plead to the allegations in paragraph 2 as the Applicant makes no allegations against it.

#### **A. SCIENTIFIC AND OTHER MATERIAL AFFECTED BY IMPROPER PRACTICES AND/OR GHOST AUTHORED BY MONSANTO EMPLOYEES**

3. It admits the allegation in paragraph 3.
4. In answer to paragraph 4, it
  - (a) admits that the paper by Gary M Williams, Robert Kroes and Ian C Munro titled '*Safety Evaluation and Risk Assessment of the Herbicide Roundup and*

161 Castlereagh Street  
SYDNEY NSW 2000

*its Active Ingredient, Glyphosate, for Humans*' (**Williams 2000 Paper**) did not name Monsanto employees as authors;

(b) otherwise denies the allegations in paragraph 4;

(c) says further that:

(i) subject to production by the Applicant of the Williams 2000 Paper, and reference at trial to its full terms and effect, the Williams 2000 Paper stated, among other things, that:

(A) *'Reviews on the safety of glyphosate and Roundup herbicide that have been conducted by several regulatory agencies and scientific institutions worldwide have concluded that there is no indication of any human health concern';*

(B) *'[Glyphosate and AMPA] are eliminated essentially unmetabolized. Dermal penetration studies with Roundup showed very low absorption';*

(C) *'No significant toxicity occurred in acute, sub-chronic and chronic studies';*

(D) *'There was no convincing evidence for direct DNA damage in vitro or in vivo, and it was concluded that Roundup and its components do not pose a risk for the production of heritable/somatic mutations in humans';*

(E) *'Multiple lifetime feeding studies have failed to demonstrate any tumorigenic potential for glyphosate. Accordingly, it was concluded that glyphosate is noncarcinogenic';*

(F) *'The balance of the credible data from in vitro and in vivo test results confirms the safety of glyphosate and Roundup as nongenotoxic and conforms to the fact that glyphosate is noncarcinogenic';*

(G) *'It was concluded that, under present and expected conditions of use, Roundup herbicide does not pose a health risk to humans';*

(ii) the Williams 2000 Paper did not name Monsanto employees as authors, and it would have been inappropriate for it to do so because the contribution made by Monsanto employees was not a significant

contribution to the conception, design, or interpretation of the reported study;

- (iii) the assistance of Monsanto employees who participated in the preparation of the Williams 2000 Paper was expressly acknowledged by the authors;

#### **Particulars**

The acknowledgement is in writing, contained on page 160 of the Williams 2000 Paper, and is in the following terms:

*'The authors acknowledge the assistance of individuals who participated in the preparation of this document. First, we are grateful to those who gathered and made available the large amount of information used to write the manuscript for this document. Second, we thank the toxicologists and other scientists at Monsanto who made significant contributions to the development of exposure assessments and through many other discussions. The authors were given complete access to toxicological information contained in the great number of laboratory studies and archival material at Monsanto in St. Louis, Missouri, and elsewhere. Key personnel at Monsanto who provided scientific support were William F. Heydens, Donna R. Farmer, Marian S. Bleeke, Stephen J. Wratten, and Katherine H. Carr.'*

- (iv) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Williams 2000 Paper by Gary M Williams, Robert Kroes and Ian C Munro; and
- (v) in the premises identified in paragraphs 4(c)(ii) to 4(c)(iv) above the contribution made by Monsanto employees did not amount to authorship.

5. It admits the allegations in paragraph 5 and says further that the paper by Amy Williams, Rebecca Watson and John DeSesso titled *'Developmental and Reproductive Outcomes in Humans and Animals after Glyphosate Exposure: A Critical Analysis'*

published in the Journal of Toxicology and Environmental Health (**Williams 2012 Paper**) was also published online on 27 December 2011.

6. In answer to paragraph 6, it:

- (a) admits that the Williams 2012 Paper did not name Donna Farmer or David Saltmiras as authors;
- (b) otherwise denies the allegations in paragraph 6;
- (c) says further that:

- (i) subject to production by the Applicant of the Williams 2012 Paper, and reference at trial to its full terms and effect, the Williams 2012 Paper stated, among other things, that:

- (A) *'An extensive, in-depth analysis of the available literature provides no apparent evidence to indicate that exposure to glyphosate is associated with the potential to produce adverse developmental and reproductive effects in humans.'*

- (B) *'In conclusion, a thorough evaluation of the available data demonstrates that exposure to environmentally relevant glyphosate concentrations is not anticipated to produce adverse developmental and reproductive effects in humans.'*

- (ii) Donna Farmer and David Saltmiras assisted the authors of the Williams 2012 Paper with:

- (A) articles, studies, data; and

- (B) suggestions in the form of amendments and additions to the draft of the Williams 2012 Paper;

- (iii) the Williams 2012 Paper does not name Donna Farmer and David Saltmiras as authors of the paper and it would have been inappropriate for it to do so because:

- (A) according to the Author Guidelines published by Taylor & Francis, the company that published the Williams 2012 Paper in the Journal of Toxicology and Environmental Health, at the time of the Williams 2012 Paper, authors were advised, *inter alia*, that: (1) *'Co-authors' are defined as any person who has made a significant scientific contribution to*

*the work reported, and who shares responsibility and accountability for the results.’ (2) ‘all named co-authors:… must have made a significant contribution to the work reported, in terms of research conception or design, and/or acquisition of data, and/or the analysis and interpretation of those data’ (3) ‘all named co-authors:… are responsible for drafting, writing, and revising the article, or checking and confirming the article prior to submission’ (4) ‘all named co-authors:… approve the final version of the article prior to submission’;*

- (B) the contribution made by Donna Farmer and David Saltmiras was not significant in the context of the Williams 2012 Paper;
- (C) the authors of the Williams 2012 Paper retained complete authority to accept or reject suggested amendments to the Williams 2012 Paper;
- (D) to the extent that amendments and additions were accepted by the authors and adopted in the Williams 2012 Paper, the authors of the Williams 2012 Paper independently verified and approved the suggested amendments and additions provided by Donna Farmer and David Saltmiras;
- (E) the Williams 2012 Paper manuscript was considered by five independent reviewers prior to publication; and
- (F) the Williams 2012 Paper disclosed that Monsanto Company had provided:
  - (1) funding for the Williams 2012 Paper;
  - (2) unpublished glyphosate and surfactant toxicity study reports to the authors of the Williams 2012 Paper; and
  - (3) other data for the purpose of the Williams 2012 Paper.

### **Particulars**

The disclosure is contained in:

- (1) the footer on the page marked 39 (page one of the Williams 2012 Paper itself) of the Williams 2012 Paper and is in the form '*The authors acknowledge the Monsanto Company for funding and for providing its unpublished glyphosate and surfactant toxicity study reports*';
  - (2) a statement on pages marked 41 to 42 of the Williams 2012 Paper that '*Experimental investigations conducted by the Monsanto Company in support of regulatory requirements were made available to the authors*'; and
  - (3) a statement on the page marked 42 that '*animal studies (both published reports as well as unpublished studies owned by Monsanto) addressing appropriate toxicity endpoints were reviewed*'.
- (iv) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Williams 2012 Paper by Amy Williams, Rebecca Watson and John DeSesso; and
- (v) in the premises identified in paragraphs 6(c)(ii) to 6(c)(iv) above the contribution made by Monsanto employees did not amount to authorship.

7. In answer to paragraph 7:

- (a) it admits that an email from Professor Chassy to Professor A. Wallace Hayes dated 26 September 2012 [MONGLY00900629] was sent to the editor of the journal Food and Chemical Toxicology by Professor Bruce Chassy following the publication by that journal of a paper by Gilles-Eric Séralini, Emilie Clair, Robin Mesnage, Steeve Gress, Nicolas Derrge, Manuela Malateste, Didier Hennequin and Joel Spiroux de Vendomis titled '*Long term toxicity of a Roundup herbicide and a Roundup-tolerant genetically modified maize*' (**Séralini 2012 Paper**); and

(b) it otherwise denies the allegations in paragraph 7.

8. In answer to paragraph 8, it:

(a) denies the allegations in paragraph 8;

(b) says further that:

(i) subject to production by the Applicant of the Séralini 2012 Paper, and reference at trial to its full terms and effect, the Séralini 2012 Paper as originally published stated, among other things, that:

(A) *'Metastases were observed in only 2 cases; one in a group fed with 11% GM maize, and another in the highest dose of R treatment group'*; and

(B) *'These results can be explained by the non-linear endocrine-disrupting effects of Roundup, but also by the overexpression of the transgene in the GMO and its metabolic consequences.'*;

(ii) the Séralini 2012 Paper was retracted from the journal Food and Chemical Toxicology in November 2013, following criticism from the scientific community and an investigation by the journal itself, because, among other things, it contained a number of deficiencies;

#### **Particulars**

(1) A number of letters to the editor of the journal Food and Chemical Toxicology were critical of the Séralini 2012 Paper, including letters from individuals at:

- i. Monsanto Company  
[McNickleProdVolFive00143046];
- ii. the University of Melbourne  
[McNickleProdVolFive00183234];
- iii. the Brazilian Biosafety Association  
[McNickleProdVolFive00129721];
- iv. the Agricultural Genetics Institute, Vietnam  
[McNickleProdVolFive00131959];
- v. the Flanders Institute for Biotechnology, Belgium  
[McNickleProdVolFive00142322];

- vi. the Russian Academy of Sciences  
[McNickleProdVolFive00167182];
- vii. Vancouver Island University, and 24 others  
[McNickleProdVolFive00186505];
- viii. the University of Adelaide  
[McNickleProdVolFive00153925] and  
[McNickleProdVolFive00182364];
- ix. the University of London  
[McNickleProdVolFive00119900];
- x. The University of Edinburgh  
[McNickleProdVolFive00183225];
- xi. The European Society of Toxicologic Pathology  
[McNickleProdVolFive00175375],

and a letter from:

- xii. Dr Louis Ollivier [McNickleProdVolFive00279081] in his personal capacity.

(2) A reply to the letters to the editor of the journal Food and Chemical Toxicology, drafted by Dr Wallace Hayes, which stated, among other things, that '*A careful and time-consuming analysis found that the data [in the Séralini 2012 Paper] were inconclusive, and therefore the conclusions described in the article were unreliable. Accordingly, the article was retracted*' [McNickleProdVolFive00143783].

(3) Letter from Professor A. Wallace Hayes, editor-in-chief of the journal Food and Chemical Toxicology, to Professor Séralini concerning the retraction of the Séralini 2012 Paper following an investigation [McNickleProdVolFive00110958].

(iii) the deficiencies in the Séralini 2012 Paper included that:

(A) '*The claimed toxicity of Roundup is implausible and doesn't align with extensive data from well designed and conducted long-term studies that used the active ingredient of Roundup; glyphosate, in multiple species (i.e. mice, rats, rabbits and dogs) at higher doses where no effects were observed*';

### Particulars

Food Standards Australia response to the Séralini 2012 Paper

<<https://www.foodstandards.gov.au/consumer/gmfood/Séralini/pages/default.aspx>> (accessed 18 December 2020).

- (B) there were flaws in the experimental design, including that the study did not comply with internationally recognised standards for long-term carcinogenicity studies, including as to the minimum number of animals to be used;

### Particulars

- i. Monsanto's comments on the Séralini 2012 Paper [McNickleProdVolFive00110960], page 2.
- ii. Monsanto's detailed technical comments on the Séralini 2012 Paper [McNickleProdVolFive00110994], pages 1 and 2.
- iii. Food Standards Australia response to the Séralini 2012 Paper <<https://www.foodstandards.gov.au/consumer/gmfood/Séralini/pages/default.aspx>> (accessed 18 December 2020).
- iv. European Food Safety Authority review of the Séralini 2012 Paper [McNickleProdVolFive00110927], pages 5 and 9.

- (C) there was an inappropriate application of statistical methods to analyse the toxicology data, and the number of animals used was too small and insufficient for statistically assessing the claimed differences between the test groups and the control group;

### Particulars

- i. Monsanto's comments on the Séralini 2012 Paper [McNickleProdVolFive00110960], pages 3 and 4.

- ii. Monsanto's detailed technical comments on the Séralini 2012 Paper [McNickleProdVolFive00110994], pages 2, 3 and 11.
- iii. European Food Safety Authority review of the Séralini 2012 Paper [McNickleProdVolFive00110927], pages 6 and 9.
- iv. Health Canada and the Canadian Food Inspection Agency's review of the Séralini 2012 Paper <<https://www.canada.ca/en/health-canada/services/food-nutrition/genetically-modified-foods-other-novel-foods/canadian-food-inspection-agency-statement-Séralini-2012-publication-2-year-rodent-feeding-study-glyphosate-formulations-maize-nk603.html>> (accessed 18 December 2020).

(D) the main conclusions of the authors were not supported by the presented data, which was incomplete or missing;

**Particulars**

- i. Monsanto's comments on the Séralini 2012 Paper [McNickleProdVolFive00110960], pages 3 and 5.
- ii. Monsanto's detailed technical comments on the Séralini 2012 Paper [McNickleProdVolFive00110994], page 10.

(E) *'The methodology used was inadequately described, the full data set was not presented, and the data that was reported was not presented in a transparent manner.'*;

**Particulars**

Health Canada and the Canadian Food Inspection Agency's review of the Séralini 2012 Paper <<https://www.canada.ca/en/health-canada/services/food-nutrition/genetically-modified-foods-other-novel-foods/canadian-food-inspection-agency-statement-Séralini-2012-publication-2-year-rodent-feeding-study-glyphosate-formulations-maize-nk603.html>>

rodent-feeding-study-glyphosate-formulations-maize-nk603.html> (accessed 18 December 2020).

- (F) the authors misinterpreted the study's findings, and failed to acknowledge that tumour rates fell within historical norms for the relevant strain of laboratory rat;

**Particulars**

- i. Monsanto's comments on the Séralini 2012 Paper [McNickleProdVolFive00110960], page 3.
- ii. Monsanto's detailed technical comments on the Séralini 2012 Paper [McNickleProdVolFive00110994], pages 3 to 5.
- iii. Food Standards Australia response to the Séralini 2012 Paper <<https://www.foodstandards.gov.au/consumer/gmfood/Séralini/pages/default.aspx>> (accessed 18 December 2020).

- (G) *'The study was underpowered, it was poorly presented and poorly analysed'*;

**Particulars**

Deposition of the Applicant's expert witness, Christopher Portier, dated 17 April 2018 [McNickleProdVolEight00075602] at 591:8-21.

- (H) it *'wasn't conducted very well...it wasn't adequate... It's just not a good study.'*;

**Particulars**

Deposition of the US Plaintiffs' expert witness, Charles Jameson, dated 27 September 2018 [McNickleProdVolEight00030637] at 269:21-270:6.

- (I) *'The study was widely rejected by the scientific community as poorly planned and executed. There is no evidence that the study was scientifically significant in any way.'*;

**Particulars**

*Pilliod v Monsanto*, Order on Motions in Limine No. 18, Mar. 19, 2019, per Judge Smith.

- (c) in 2014, the results of the Séralini 2012 Paper were republished in the open-access journal *Environmental Sciences Europe* (**Republished Séralini Paper**);

**Particulars**

Republished Séralini Paper [McNickleProdVolFive00176433].

- (d) the Republished Séralini Paper stated, among other things, that:
- (i) *‘Our data show that the signs of liver and kidney toxicity seen at 90 days from the consumption of NK603 GM maize [3, 7] do indeed escalate into severe disease over an extended period’;*
  - (ii) *‘Furthermore, similar negative health effects were observed in all treatment groups (NK603 GM maize with or without R application and R alone)’;*
  - (iii) *‘What is also evident from our data is that ill effects were not proportional to the dose of either the NK603 GM maize ± R or R alone. This suggests that the observed disease may result from endocrine disruptive effects, which are known to be non-monotonic.’;* and
  - (iv) *‘By the beginning of the 24<sup>th</sup> month, 50-80% of female animals had developed tumors in all treated groups’.*
- (e) the Republished Séralini Paper was given no weight by the International Agency for Research on Cancer (**IARC**), who stated that *‘[the study] was inadequate for evaluation because the number of animals per group was small, the histopathological description of tumours was poor, and incidences of tumours for individual animals were not provided’;*

**Particulars**

IARC Monograph on Glyphosate [McNickleProdVolEight00008820], page 35.

9. In answer to paragraph 9:

- (a) it admits that the written correspondence referred to in paragraph 7 of the Applicant's Reply was sent to the editor of the journal Food and Chemical Toxicology from Professor Bruce Chassy;
- (b) subject to production by the Applicant of the written correspondence to the editor of the journal Food and Chemical Toxicology from Professor Bruce Chassy, referred to in paragraph 7 of the Applicant's Reply, and reference at trial to its full terms and effect, it admits that the written correspondence to the editor of the journal Food and Chemical Toxicology from Professor Bruce Chassy stated, among other things, that:
- (i) *'Séralini's mockery of science could have a profoundly negative impact on the journal, on the perceptions of the peer review process, and on science in general';*
  - (ii) *'the process of peer-review has abjectly failed in this instance';*
  - (iii) *'I will not take space here to detail the flaws in design, execution and analysis found in the paper in question';*
  - (iv) *'the paper reports exactly what one might have expected to see for any similarly sized group of Sprague Dawley rats. There is simply nothing unusual about what is reported in the paper. There has been accordingly an outpouring of critical comment from the scientific community';*
  - (v) *'I am in particular concerned that the journal has accepted a paper in which the authors have committed both scientific misconduct and have themselves documented unethical practices'; and*
  - (vi) *'[the authors] compound the problem by refusing to release detailed information on protocols, materials, and results'.*

### **Particulars**

Email from Professor Bruce Chassy to A. Wallace Hayes dated 26 September 2012 [MONGLY00900629], pages 3 and 4.

- (c) the written correspondence to the editor of the journal Food and Chemical Toxicology from Professor Bruce Chassy, referred to in paragraph 7 of the Applicant's Reply, stated that Professor Chassy *'sincerely hope[d] that the journal will take immediate action by retracting [the Séralini 2012 Paper]';*

### Particulars

Email from Professor Bruce Chassy to A. Wallace Hayes dated 26 September 2012 [MONGLY00900629], page 5.

- (d) otherwise denies paragraph 9; and
- (e) says further that:
  - (i) it refers to and repeats its response to paragraph 8 above;
  - (ii) the reference to retracting the publication of the Séralini 2012 Paper was justified in all the circumstances;
  - (iii) written correspondence to the editor of the journal Food and Chemical Toxicology was required to be formally submitted so that it could be considered for publication to the journal Food and Chemical Toxicology, and Eric Sachs communicated with Professor Bruce Chassy to inform him of that fact;
  - (iv) the communication by Eric Sachs referred to in sub-paragraph (iii) above did not contain a request for Professor Bruce Chassy to call for retraction of the Séralini 2012 Paper; and

### Particulars

Deposition of Eric Sachs dated 18 September 2018 [McNickleProdVolSeven00009736] at 281:1-3

- (v) it denies that any involvement of Monsanto had an impact on the validity of the conclusions of the correspondence referred to in paragraph 7 of the Applicant's Reply of Professor Bruce Chassy.
10. It admits the allegation in paragraph 10.
  11. In answer to paragraph 11, it:
    - (a) admits that the article by Henry Miller titled '*Scientists Smell a Rat in Fraudulent Study*' published in Forbes in 2012 (**2012 Forbes Article**) did not name Monsanto Employees as authors of, or contributors to, but says that it would have been inappropriate for it to do so, as the contribution of Monsanto employees was limited and was in the nature of general suggestions and identification of inaccuracies in the draft article;
    - (b) otherwise denies the allegations in paragraph 11;

- (c) says further that subject to production by the Applicant of the 2012 Forbes Article, and reference at trial to its full terms and effect:
- (i) the scientific community had raised criticisms of the Séralini 2012 Paper;
  - (ii) the 2012 Forbes Article stated, among other things, that:
    - (A) *'There is so much wrong with the experimental design that the conclusion is inescapable that the investigators intended to get a spurious, preordained result'*;
    - (B) *'mortality rates and tumor incidence in all experimental groups fall within historical norms for this strain of laboratory rats'*;
    - (C) *'the statistical methods employed were unconventional and appeared to be selected specifically in order to give a certain result'*;
    - (D) *'absence of statistical analysis for mortality or tumor incidence'*;
    - (E) *'inappropriate, unnecessary suffering of the rats, which should have been euthanized long before the tumors became so huge – an especially egregious ethics violation'*;
    - (F) *'the reported results conflict with innumerable experiments conducted by laboratories around the world on both genetically engineered corn and glyphosate, and also with vast real-world experience'*; and
    - (G) *'the publication of this article represents an abject, egregious failure of peer-review and editorial competence at Food and Chemical Toxicology, the journal in which it appeared'*; and
  - (iii) it denies that any involvement of Monsanto in the preparation of the 2012 Forbes Article had an impact on the validity of the conclusions reached in the 2012 Forbes Article by Henry Miller;

12. In answer to paragraph 12, it:

- (a) admits that the Séralini 2012 Paper was retracted from the journal Food and Chemical Toxicology but says this occurred in November 2013;

- (b) refers to and repeats paragraph (8)(b)(ii), (8)(b)(iii), 8(c) and 8(e) above; and
  - (c) otherwise denies the allegations in paragraph 12.
13. In answer to paragraph 13, it:
- (a) admits the allegations in paragraph 13; and
  - (b) says further that the 2012 paper by Pamela Mink, Jack Mandel, Bonnielin Scurman and Jessica Lundin titled '*Epidemiologic studies of glyphosate and cancer: a review*' (**Mink 2012 Paper**) was also published online on 7 June 2012.
14. In answer to paragraph 14, it:
- (a) admits that the Mink 2012 Paper did not name Donna Farmer or Daniel Goldstein as authors of the paper, and it says that it would have been inappropriate for it to do so:
    - (i) the suggested amendments to the Mink 2012 Paper were primarily confined to the introduction to the Mink 2012 Paper and did not alter any of the authors' evaluations or conclusions;
    - (ii) the authors of the Mink 2012 Paper retained complete authority to accept or reject suggested amendments to the Mink 2012 Paper;
    - (iii) to the extent that amendments and additions provided by Donna Farmer and/or Daniel Goldstein were adopted in the Mink 2012 Paper, the authors of the Mink 2012 Paper approved those suggestions;
    - (iv) the Mink 2012 Paper acknowledged:
      - (A) the contribution of Monsanto Company to the Mink 2012 Paper;
      - (B) the funding arrangements for the Mink 2012 Paper;

#### **Particulars**

The Mink 2012 Paper contains (a) a conflict of interest statement in the form '*The authors have disclosed the funding source for this research. JSM has served as (sic) a paid consultant to Monsanto Company. Final decisions regarding the content of the manuscript were made solely by the four authors*' and (b) an acknowledgement in the

*form 'This research was supported by the Monsanto Company, St. Louis, Missouri'.*

- (b) otherwise denies the allegations contained in paragraph 14;
- (c) says further that:
  - (i) subject to production by the Applicant of the Mink 2012 Paper and reference at trial to its full terms and effect:
    - (A) the abstract to the Mink 2012 Paper contains the statement that *'Our review found no consistent pattern of positive associations indicating a causal relationship between total cancer (in adults or children) or any site-specific cancer and exposure to glyphosate.'*
    - (B) the Mink 2012 Paper contains the statements:
      - (1) *'Our review of the currently available epidemiologic literature on glyphosate and cancer found no evidence of a consistent pattern of positive associations that would be indicative of a causal relationship between any site—specific cancer and exposure to glyphosate.'*; and
      - (2) *'None of the AHS cohort study analyses reported statistically significant positive findings for glyphosate exposure and total cancer or any site—specific cancer in adults or children.'*
  - (ii) Donna Farmer and Daniel Goldstein assisted the authors of the Mink 2012 Paper by providing them with relevant publicly available articles and suggested amendments and additions to a draft of the Mink 2012 Paper;
  - (iii) the authors at all times retained the ability to accept or reject any suggested amendments or additions to the draft of the Mink 2012 Paper;
  - (iv) the involvement of Monsanto was appropriately acknowledged and it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Mink

2012 Paper by Pamela Mink, Jack Mandel, Bonnielin Scurman and Jessica Lundin; and

- (v) in the premises identified in paragraphs 14(a), 14(c)(ii) to (iv) above the contribution made by Monsanto employees did not amount to authorship.

15. It admits the allegations in paragraph 15.

16. In answer to paragraph 16, it:

- (a) admits that a paper by Kier and Kirkland titled '*Review of genotoxicity studies of glyphosate and glyphosate-based formulations*' described in paragraph 15 of the Applicant's Reply (**Kier and Kirkland 2013 Paper**) did not name David Saltmiras as an author;
- (b) otherwise denies the allegations in paragraph 16 and says further that subject to production by the Applicant of the paper described in paragraph 15 of the Applicant's Reply (the Kier and Kirkland 2013 Paper), and reference at trial to its full terms and effect:
  - (i) the Kier and Kirkland 2013 Paper stated, among other things, that:
    - (A) '*An overwhelming preponderance of negative results in well-conducted bacterial reversion and in vivo mammalian micronucleus and chromosomal aberration assays indicates that glyphosate and typical GBFs [glyphosate-based formulations] are not genotoxic in these core assays*';
    - (B) '*Negative results for in vitro gene mutation and a majority of negative results for chromosomal effect assays in mammalian cells add to the weight of evidence that glyphosate is not typically genotoxic for these endpoints in mammalian systems*';
    - (C) '*Glyphosate and typical GBFs do not appear to present significant genotoxic risk under normal conditions of human or environmental exposures*';
  - (ii) the Kier and Kirkland 2013 Paper was the result of an amalgamation of two different projects, specifically:

- (A) a review manuscript of the glyphosate genotoxicity literature and the Monsanto genotoxicity data set, authorised on or around 22 February 2011 (**Initial Project**); and
- (B) a review manuscript involving all glyphosate genotoxicity studies owned by the European Glyphosate Task Force (**GTF**) member companies on both the active ingredient and formulated products, authorised in or around July 2012 (**Subsequent Project**),

which merged into one project in or around July 2012 (**Combined Project**);

#### **Particulars**

Email from David Saltmiras to William Graham, among others, dated 13 July 2012 [MONGLY02145917].

- (iii) David Saltmiras was involved in assisting, to a limited extent, and facilitating Larry D. Kier with his draft manuscript for the Initial Project;

#### **Particulars**

The assistance and facilitation provided by David Saltmiras with respect to the Initial Project was limited to:

- (1) facilitating Larry D Kier's access to studies from Monsanto;
- (2) reviewing drafts of the manuscript and making suggested amendments which did not contribute substantially to the technical content of those drafts; and
- (3) further particulars may be provided following discovery and evidence.

- (iv) David Saltmiras was precluded from authoring the Subsequent Project because it required the review of the raw data of proprietary glyphosate genotoxicity studies held by other glyphosate registrant companies in the taskforce which were competitors of Monsanto Company;

#### **Particulars**

Email from David Saltmiras to William Graham, among others, dated 13 July 2012 [MONGLY02145917].

- (v) by reason of the matters pleaded at sub-paragraph 16(b)(iii) to 16(b)(iv) above, David Saltmiras was removed as a potential author of the Combined Project and David J. Kirkland, an expert in genotoxicity, co-authored the Combined Project alongside Larry D. Kier;
- (vi) further and alternatively, it would have been inappropriate for David Saltmiras to be named as an author because:
- (A) the authorship requirements as set forth by Francis & Taylor (the company that published the Kier and Kirkland 2013 Paper in the journal *Critical Reviews in Toxicology*) at the relevant time provided that an author:
- (1) *'must have made a significant contribution to the work reported, in terms of research conception or design, and/or acquisition of data, and/or the analysis and interpretation of those data'*;
  - (2) is responsible for drafting, writing, and revising the article, or checking and confirming the article prior to submission;
  - (3) approves the final version of the article prior to submission;
  - (4) is aware and approves that the final version of the article has been submitted;
  - (5) accepts responsibility and accountability for all content; and
  - (6) accepts that if the article is found to be unsafe, in error, or in some way fraudulent, or in breach of warranties made, that responsibility is shared by all named co-authors;
- (B) David Saltmiras' contribution to the Combined Project was not significant enough to amount to authorship, nor, for the reasons set out at 16(b)(iv) above could it be significant having regard to the fact that David Saltmiras was precluded from authoring the Subsequent Project;

- (C) the contribution and service of David Saltmiras in respect of the Kier and Kirkland 2013 Paper was expressly acknowledged;

#### Particulars

- (1) The acknowledgements section within the Kier and Kirkland 2013 Paper stated the following:

- i. *'The authors would like to thank the following individuals for their contributions to this work by providing regulatory studies and their thoughtful review of the manuscript: David Saltmiras (Monsanto Company)...';* and
- ii. *'We would also like to acknowledge David Saltmiras for his invaluable service in providing coordination with individual companies and the Glyphosate Task Force';* and

- (vii) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Kier and Kirkland 2013 Paper by Larry D. Kier and David J. Kirkland.

17. It admits the allegation in paragraph 17.
18. Subject to production of the letter dated 9 October 2015 to Ms Esther Barajas-Ochoa, of the Office of Environmental Health Hazard Assessment from Professor Samuel M. Cohen of the University of Nebraska Medical Centre, referred to in paragraph 18 of the Applicant's Reply (**OEHHA Letter**) and reference at trial to its full terms and effect, it admits the allegations in paragraph 18.
19. In answer to paragraph 19:
- (a) subject to production of the OEHHA Letter and reference at trial to its full terms and effect, it admits the OEHHA Letter was critical of the IARC decision;
  - (b) it otherwise denies paragraph 19;
  - (c) it says further that:
    - (i) the OEHHA Letter criticised IARC's inclusion of the Republished Séralini Paper;

**Particulars**

- (1) Page 3 of the OEHHA Letter contained the following paragraph which was drafted by Professor Samuel M. Cohen:

*'An additional indication of the bias of this panel is their inclusion of a recent publication by Séralini et al, which was republished in Environmental Sciences Europe after being retracted from a previous publication in Food and Chemical Toxicology. I am astonished that the panel appears to be completely unaware of the numerous deficiencies of this study which resulted in its retraction from publication in Food and Chemical Toxicology. The details of the deficiencies of the Séralini et al study were broadly documented in the literature with Letters to the Editor and a variety of other means.'*

[McNickleProdVolThree00020557].

- (ii) prior to preparing the OEHHA Letter, Professor Samuel M. Cohen was provided with a model letter by Monsanto;

**Particulars**

- (1) Email correspondence from Daniel Goldstein to Professor Samuel M. Cohen dated 2 October 2015 which stated, among other things:

- i. *'QUESTION: Would you be willing to consider submitting a comment to OEHHA regarding carcinogenicity classification of glyphosate?'*
- ii. *'If you are willing to consider this, I am happy to send you the IARC monograph and a summary of same with commentary, as well as a pro-forma letter with the proper address, etc. so that you do not need to dig out the procedural information. Your comments, obviously, would be your own- but this would minimize the effort needed on your part.'*

[McNickleProdVolThree00020549].

- (2) Email correspondence from Daniel Goldstein to Professor Samuel M. Cohen dated 6 October 2015 attaching a model letter. The email correspondence stated, among other things:
- i. *'This model letter is intended to provide the pro-forma content needed for transmission of the letter... and to provide suggested content to minimize the work on your end given your schedule. You are obviously free to comment entirely as you wish and change the letter in any way that suits your opinion.'*
  - ii. *'I know you have specific opinions about the IARC process itself, and you should feel free to express them. I have limited my draft comments to factual information as I do not feel it is appropriate for me to attempt to draft comments on IARC itself.'*

[McNickleProdVolThree00020549].

- (iii) the OEHHA Letter [McNickleProdVolThree00020557]:
- (A) was substantially edited by Professor Samuel M. Cohen prior to submission to the OEHHA in comparison with the model letter provided to Professor Cohen [McNickleProdVolThree00020549];
  - (B) expressed opinions which were those of Professor Samuel M. Cohen and not of Monsanto employees; and
- (iv) it denies that any involvement of Monsanto had an impact on the validity of the underlying content or conclusions reached in the OEHHA letter by Professor Samuel M. Cohen.

20. It admits the allegations in paragraph 20.

21. It denies the allegations in paragraph 21 and says further that:

- (a) in February 2015, an employee of Monsanto made enquiries with Henry Miller, then a professor at Stanford University, regarding the preparation of a column piece on IARC's review of glyphosate and confirmed that they had *'background'* and could *'provide information'* to Mr Miller, if required;

- (b) on 20 March 2015 the 'op ed' article titled 'Viewpoint: March Madness from the United Nations' was published online in Forbes (**2015 Forbes Article**);
  - (c) subject to production by the Applicant of the 2015 Forbes Article and reference at trial to its full terms and effect, the 2015 Forbes Article, referred to in paragraph 20 of the Applicant's Reply stated, among other things, that '*The same applies to the IARC's analysis of glyphosate. The data (and a selected set of data, at that) were reviewed to determine whether glyphosate is capable of causing cancer*' and '*So, could any of these new documents have led IARC to their less favourable conclusion? No – because these reviews further affirmed the safety of glyphosate and the absence of linkage between glyphosate and cancer risk*'; and
  - (d) the 2015 Forbes Article was subsequently removed from the Forbes website but was not formally retracted.
22. It admits the allegations in paragraph 22.
23. In answer to paragraph 23, it:
- (a) admits that the paper by David Brusick, Marilyn Aardema, Larry D. Kier, David J. Kirkland and Gary Williams titled '*Genotoxicity Expert Panel review: weight of evidence evaluation of the genotoxicity of glyphosate, glyphosate-based formulations, and aminomethylphosphonic acid*', described in paragraph 23 of the Applicant's Reply (**Brusick 2016 Paper**) does not name Monsanto employees as authors of the paper and says that it would have been inappropriate for it to do so because according to the authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal *Critical Reviews in Toxicology*) authorship should be limited to those who have made '*a significant contribution*' to the '*research conception or design, acquisition of data, analysis and interpretation or in all these areas.*'

### Particulars

The authorship requirements as set forth by Francis & Taylor required that:

- (1) the relevant person has made a significant contribution to the work reported, whether that's in the research conception or design, acquisition of data, analysis and interpretation, or;

- (2) in all of the areas referred to in (1) above, the relevant person:
- i. has drafted, written or revised the article;
  - ii. has reviewed and agreed on the final version of the article before submission;
  - iii. has agreed on the journal to which the article will be submitted;
  - iv. is aware that they are taking responsibility and accountability for the content of the article;
  - v. is aware that the corresponding author will be acting on their behalf in any communications about the article, through submission, peer review, production and after publication; and
  - vi. shares responsibility with all named co-authors if the article is found to be unsafe, in error or in some way fraudulent or in breach of the publishing agreement in place.
- (b) denies the allegations in paragraph 23;
- (c) says further that:
- (i) on 1 July 2015, the Third Respondent and Intertek Health Sciences Inc. (**Intertek**) entered into a Consulting Agreement whereby Intertek were required to organise and conduct a panel of independent third party experts who would undertake a thorough review in the four areas considered by IARC (the **Intertek Consulting Agreement**);
  - (ii) the Intertek Consulting Agreement contained the following objectives:
    - (A) *'Intertek will organise, host and facilitate an Expert Panel meeting(s)';*
    - (B) *'prior to the meeting(s) and after review of all Information Intertek will request feedback from each of the Panellists regarding conclusions on the safety of glyphosate';*

- (C) *'Monsanto will prepare and supply, as needed, documentation and references to support the evaluation of glyphosate.'*
- (iii) subject to production by the Applicant of Brusick 2016 Paper, and reference at trial to its full terms and effect, the Brusick 2016 Paper stated, among other things, that:
- (A) *'The Expert Panel concluded that glyphosate, GBFs, and AMPA genotoxicity response profiles are not consistent with characteristics of genotoxic carcinogens (Table 4)';*
- (B) *'The Expert Panel concluded that the IARC assessment of classifications regarding strong evidence of genotoxicity and oxidative stress capabilities of glyphosate, GBFs, and AMPA is not supported by the available data';*
- (C) *'A critical review of the complete dataset by the Expert Panel supports a conclusion that glyphosate (including GBFs and AMPA) does not pose a genotoxic hazard and therefore should not be considered support for the classification of glyphosate as a genotoxic carcinogen';*
- (D) *'The evidence for oxidative stress/damage as a mechanism or predictor of carcinogenesis is unconvincing';*
- (E) *'...A number of published and regulatory approval reviews of the carcinogenic and genotoxic potential of glyphosate, AMPA and GBFs were available prior to the development of the IARC Monograph (Health and Welfare Canada 1991; US EPA 1993; WHO 1994; Williams et al 2000; European Commission 2002; Kier & Kirkland 2013; US EPA 2013). The consensus among these reviews was that proper use of glyphosate and GBFs does not pose a genotoxic or carcinogenic hazard/risk with hazard indicating potential for adverse effects and risk indicating potential for adverse effects under actual conditions and amounts of exposure. As a result, glyphosate-based herbicides have been approved for use in over 160 countries. The recent IARC conclusion was therefore inconsistent with these other reviews.'*

*Consequently, the Monsanto Company commissioned Intertek Scientific & Regulatory Consultancy to assemble a panel of experts to conduct a thorough review in the four areas considered by IARC including mechanistic data (focused on genotoxicity and oxidative stress). This review section reports the views of the Expert Panel of genetic toxicologists on the genotoxicity of glyphosate, GBFs and AMPA and discusses how they relate to the IARC opinions. The views and conclusions represent those of the Expert Panel of genetic toxicologists as independent scientific consultants and neither employees of the Monsanto Company nor attorneys reviewed this manuscript prior to submission’;*

- (iv) Monsanto personnel provided the necessary background and historical data on glyphosate to the authors and provided non-substantive contributions in the nature of final formatting suggestions on the article;
- (v) in the premises, the contribution made by the Monsanto employees did not amount to authorship;

#### **Particulars**

It refers to and repeats the particulars to paragraph 23(a) above.

- (vi) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Brusick 2016 Paper by David Brusick, Marilyn Aardema, Larry D. Kier, David J. Kirkland and Gary Williams; and
- (vii) further and alternatively, on 26 September 2018, the journal Critical Reviews in Toxicology published a corrigendum in relation to the Brusick 2016 Paper which clarified and amended the Acknowledgements and the Declaration of Interest section as it originally appeared in the article, such that there was disclosure of various consultancy arrangements between the Third Respondent and certain authors and confirmation that employees of the Third Respondent had assisted with the final formatting of the article.

24. In answer to paragraph 24, it:

- (a) admits that the paper by Gary M Williams, Marilyn Aardema, John Acquavella, Sir Colin Berry, David Brusick, Michele M. Burns, Joao Lauro Viana de Camargo, David Garabrant, Helmut A. Greim, Larry D. Kier, David J. Kirkland, Gary Marsh, Keith R. Solomon, Tom Sorahan, Ashley Roberts and Douglas L. Weed titled *'A review of the carcinogenic potential of glyphosate by four independent expert panels and comparison to the IARC assessment'* published in the journal *Critical Reviews in Toxicology*, described in paragraph 24 of the Applicant's Reply (**Williams (a) 2016 Paper**), does not name Monsanto employees as authors of the paper;
- (b) otherwise denies paragraph 24;
- (c) says further that:
- (i) subject to production of the Williams (a) 2016 Paper, and reference at trial to its full terms and effect, the Williams (a) 2016 Paper stated, among other things, that:
- (A) *'Given these differences, even without the data IARC did not include, there is no support for IARC's conclusion that glyphosate is probably carcinogenic to humans.'*;
- (B) *'Overall, extensive reviews of the genotoxicity of glyphosate, AMPA and GBFs that were available prior to the development of the IARC Glyphosate Monograph all support a conclusion that glyphosate (and related materials) is inherently not genotoxic. Further, evidence indicative of an oxidative stress mechanism of carcinogenicity is largely unconvincing.'*;
- (C) *'In summary, the totality of the evidence, especially in light of the extensive testing that glyphosate has received, as judged by the Expert Panels, does not support the conclusions that glyphosate is a 'probable human carcinogen' and, consistent with the previous regulatory assessments, the Expert Panels conclude that glyphosate is unlikely to pose a carcinogenic risk to humans'*;
- (ii) it refers to and repeats paragraph 23(c) with respect to the Intertek Consulting Agreement;

- (iii) employees of Monsanto facilitated the preparation of the article by providing the necessary historical data on glyphosate to the authors and providing comments on drafts of the article;
- (iv) it would have been inappropriate for the Williams (a) 2016 Paper to name Monsanto employees as authors of the paper because according to the authorship requirements as set forth by Francis & Taylor (the company that published this article in *Critical Reviews in Toxicology*) authorship should be limited to those who have made '*a significant contribution*' to the '*research conception or design, acquisition of data, analysis and interpretation or in all these areas.*'

### **Particulars**

The authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal *Critical Reviews in Toxicology*) required that:

- (1) the relevant person has made a significant contribution to the work reported, whether that's in the research conception or design, acquisition of data, analysis and interpretation, or;
- (2) in all of the areas referred to in (1) above, the relevant person:
  - i. has drafted, written or revised the article;
  - ii. has reviewed and agreed on the final version of the article before submission;
  - iii. has agreed on the journal to which the article will be submitted;
  - iv. is aware that they are taking responsibility and accountability for the content of the article;
  - v. is aware that the corresponding author will be acting on their behalf in any communications about the article, through submission, peer review, production and after publication; and
  - vi. shares responsibility with all named co-authors if the article is found to be unsafe, in error or in some way

fraudulent or in breach of the publishing agreement in place;

- (v) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Williams (a) 2016 Paper by Gary M Williams, Marilyn Aardema, John Acquavella, Sir Colin Berry, David Brusick, Michele M. Burns, Joao Lauro Viana de Camargo, David Garabrant, Helmut A. Greim, Larry D. Kier, David J. Kirkland, Gary Marsh, Keith R. Solomon, Tom Sorahan, Ashley Roberts and Douglas L. Weed;
- (vi) further and alternatively, on 30 November 2018, the journal Critical Reviews in Toxicology published a corrigendum in relation to the Williams (a) 2016 Paper which clarified and amended the Acknowledgements and the Declaration of Interest section as it originally appeared in the article, such that there was disclosure of various consultancy arrangements and confirmation that employees of the Third Respondent had provided a regulatory history overview for use by the authors in the preparation of the paper and had provided comments on drafts of the article but they had not participated in the deliberations of the expert panel and did not contribute to the conclusions drawn by the expert panel; and
- (vii) in the premises, the contribution made by the Monsanto employees did not amount to authorship.

25. In response to paragraph 25, it:

- (a) admits that the paper by Gary M Williams, Colin Berry, Michele Burns, Joao Lauro Viana de Camargo and Helmut Greim titled '*Glyphosate rodent carcinogenicity bioassay expert panel review*' published in the journal Critical Reviews in Toxicology, described in paragraph 25 of the Applicant's Reply (**Williams (b) 2016 Paper**), does not name Monsanto employees as authors of the paper;
- (b) otherwise denies paragraph 25;
- (c) says further that:
  - (i) subject to production of the Williams (b) 2016 Paper, and reference at trial to its full terms and effect, the Williams (b) 2016 Paper stated, among other things, that '*Application of criteria for causality*

*considerations to the above mentioned tumor types and given the overall WoE [weight of evidence], the expert panel concluded that glyphosate is not a carcinogen in laboratory animals.’;*

- (ii) it refers to and repeats paragraphs 23(c) above with respect to the Intertek Consulting Agreement;
- (iii) it admits that an employee of the Third Respondent provided background information and documents for a section of the Williams (b) 2016 Paper;
- (iv) employees of Monsanto facilitated the preparation of the Williams (b) 2016 Paper by providing the necessary historical data on glyphosate to the authors and providing comments on drafts of the article;
- (v) it would have been inappropriate for the Williams (b) 2016 Paper to name Monsanto employees as authors of the paper because according to the authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal Critical Reviews in Toxicology) authorship should be limited to those who have made ‘a significant contribution’ to the ‘research conception or design, acquisition of data, analysis and interpretation or in all these areas.’

### **Particulars**

The authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal Critical Reviews in Toxicology) required that:

- (1) the relevant person has made a significant contribution to the work reported, whether that’s in the research conception or design, acquisition of data, analysis and interpretation, or;
- (2) in all of the areas referred to in (1) above, the relevant person:
  - i. has drafted, written or revised the article;
  - ii. has reviewed and agreed on the final version of the article before submission;
  - iii. has agreed on the journal to which the article will be submitted;

- iv. is aware that they are taking responsibility and accountability for the content of the article;
  - v. is aware that the corresponding author will be acting on their behalf in any communications about the article, through submission, peer review, production and after publication; and
  - vi. shares responsibility with all named co-authors if the article is found to be unsafe, in error or in some way fraudulent or in breach of the publishing agreement in place.
- (vi) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Williams (b) 2016 Paper by Gary M Williams, Colin Berry, Michele Burns, Joao Lauro Viana de Camargo and Helmut Greim; and
- (vii) further and alternatively, on 30 November 2018, the journal Critical Reviews in Toxicology published a corrigendum in relation to the Williams (b) 2016 Paper which clarified and amended the Acknowledgements and the Declaration of Interest section as it originally appeared in the paper such that the involvement of Monsanto was acknowledged.
- (viii) in the premises, the contribution made by the Monsanto employees did not amount to authorship.
26. In answer to paragraph 26, it:
- (a) admits that the paper by Keith R. Solomon titled '*Glyphosate in the general population and in applicators: a critical review of studies on exposures*' published in the journal Critical Reviews in Toxicology, described in paragraph 26 of the Applicant's Reply (**Solomon 2016 Paper**) does not name Monsanto employees as authors of the paper;
  - (b) otherwise denies paragraph 26;
  - (c) says further that:
    - (i) subject to production of the Solomon 2016 Paper, and reference at trial to its full terms and effect, the Solomon 2016 Paper stated, among other things, that: '*Based on the current RfDs [current reference doses]*

*and ADIs [acceptable daily intakes], there is no hazard and no intolerable risk from exposure to glyphosate via its normal use in agriculture and management of weeds in landscapes’;*

- (ii) it refers to and repeats paragraphs 23(c) with respect to the Intertek Consulting Agreement;
- (iii) employees of Monsanto provided access to reports from exposure studies for glyphosate in applicators and clarification on some of the methods used in those studies;
- (iv) it would have been inappropriate for the Solomon 2016 Paper to name Monsanto employees as authors of the paper because according to the authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal *Critical Reviews in Toxicology*) authorship should be limited to those who have made ‘*a significant contribution*’ to the ‘*research conception or design, acquisition of data, analysis and interpretation or in all these areas.*’

### **Particulars**

The authorship requirements as set forth by Francis & Taylor (the company that published this article in *Critical Reviews in Toxicology*) required that:

- (1) the relevant person has made a significant contribution to the work reported, whether that’s in the research conception or design, acquisition of data, analysis and interpretation, or;
- (2) in all of the areas referred to in (1) above, the relevant person:
  - i. has drafted, written or revised the article;
  - ii. has reviewed and agreed on the final version of the article before submission;
  - iii. has agreed on the journal to which the article will be submitted;
  - iv. is aware that they are taking responsibility and accountability for the content of the article;

- v. is aware that the corresponding author will be acting on their behalf in any communications about the article, through submission, peer review, production and after publication; and
  - vi. shares responsibility with all named co-authors if the article is found to be unsafe, in error or in some way fraudulent or in breach of the publishing agreement in place.
- (v) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Solomon 2016 Paper by Keith R. Solomon;
  - (vi) further and alternatively, on 26 September 2018, Critical Reviews in Toxicology published a corrigendum in relation to the Solomon 2016. The corrigendum clarified and amended the Acknowledgements and the Declaration of Interest section as it originally appeared in the paper such that there was full disclosure of various consultancy arrangements and confirmation that *'KRS [Keith R Solomon] was not provided with comments from William Heydens of Monsanto Inc, either directly or via Intertek'*; and
  - (vii) in the premises, the contribution made by the Monsanto employees did not amount to authorship.
27. In answer to paragraph 27, it:
- (a) admits that the paper by John Acquavella, David Garabrant, Gary Marsh, Tom Sorahan and Douglas L. Weed titled *'Glyphosate epidemiology expert panel review: a weight of evidence systematic review of the relationship between glyphosate exposure and non-Hodgkin's lymphoma or multiple myeloma'* published in the journal Critical Reviews in Toxicology, described in paragraph 27 of the Applicant's Reply (**Acquavella 2016 Paper**) does not name Monsanto employees as authors of the paper;
  - (b) otherwise denies paragraph 27;
  - (c) says further that:
    - (i) subject to production of the Acquavella 2016 Paper and reference at trial to its full terms and effect, the Acquavella 2016 Paper stated,

among other things, that: '*Our review of the glyphosate epidemiological literature and the application of commonly applied causal criteria do not indicate a relationship with glyphosate exposure and NHL*';

- (ii) it refers to and repeats paragraphs 23(c) with respect to the Intertek Consulting Agreement;
- (iii) Monsanto personnel provided the necessary background and historical data on glyphosate and suggested non-substantive edits on a draft of the article;
- (iv) it would have been inappropriate for the Acquavella 2016 Paper to name Monsanto employees as authors of the paper because according to the authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal *Critical Reviews in Toxicology*) authorship should be limited to those who have made '*a significant contribution*' to the '*research conception or design, acquisition of data, analysis and interpretation or in all these areas.*'

### **Particulars**

The authorship requirements as set forth by Francis & Taylor (the company that published this article in the journal *Critical Reviews in Toxicology*) required that:

- (1) the relevant person has made a significant contribution to the work reported, whether that's in the research conception or design, acquisition of data, analysis and interpretation, or;
- (2) in all of the areas referred to in (1) above, the relevant person:
  - i. has drafted, written or revised the article;
  - ii. has reviewed and agreed on the final version of the article before submission;
  - iii. has agreed on the journal to which the article will be submitted;
  - iv. is aware that they are taking responsibility and accountability for the content of the article;

- v. is aware that the corresponding author will be acting on their behalf in any communications about the article, through submission, peer review, production and after publication; and
  - vi. shares responsibility with all named co-authors if the article is found to be unsafe, in error or in some way fraudulent or in breach of the publishing agreement in place.
- (v) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Acquavella 2016 Paper by John Acquavella, David Garabrant, Gary Marsh, Tom Sorahan and Douglas L. Weed;
- (vi) further and alternatively, on 26 September 2018, the journal *Critical Reviews in Toxicology* published a corrigendum in relation to the Acquavella 2016 Paper referred to in paragraph 27 of the Applicant's Reply which clarified and amended the Acknowledgements and the Declaration of Interest section as it originally appeared in the paper, such that there was full disclosure of various consultancy arrangements and confirmation that *'William Heydens of Monsanto reviewed the initial draft of our manuscript and commented that the section on analytic selection bias was unclear to him and that we might define the term 'grey literature.'* He also pointed out some typographical errors. Based on his feedback, the authors decided to clarify the section on analytic selection bias, define grey literature in a footnote, and correct the typos. All additions, deletions, and changes to the draft manuscript were made only by the authors, with unanimous agreement.'; and
- (vii) in the premises, the contribution made by the Monsanto employees did not amount to authorship.
28. In answer to paragraph 28, it:
- (a) denies the allegations in paragraph 28;
  - (b) refers to and repeats paragraphs 3 to 27 above; and
  - (c) says further that:

- (i) the prevailing scientific knowledge has not identified any reasoned basis to conclude that glyphosate is carcinogenic.

**Particulars**

It refers to and repeats Schedule B to its Defence.

- (ii) certain documents pertaining to the allegations contained in the Reply in respect of alleged ghost-writing and alleged manipulation of the state of scientific knowledge, known colloquially as the '*Monsanto Papers*', have also come into the public domain commencing from 2017;

**Particulars**

- (1) The unsealing of the first tranche of the Monsanto Papers was ordered in *MDL No. 2741* pursuant to '*Pre-trial order No. 15: Third-party discovery and pending motions to seal*' of Judge Chhabria dated 13 March 2017, following an application for the '*de-designation*' of confidentiality of the documents by plaintiffs in the United States.
  - (2) Since that time plaintiffs have sought the de-designation of further tranches of '*Monsanto Papers*'.
  - (3) The '*Monsanto Papers*' were and are published on the internet, including on the website of the law firm Baum, Hedlund, Aristei & Goldman  
<<https://www.baumhedlundlaw.com/toxic-tort-law/Monsanto-roundup-lawsuit/Monsanto-secret-documents/>> (accessed 24 December 2020).
  - (4) Some or all of the Monsanto Papers are published on the website U.S Right to Know (USRTK)  
<<https://usrtk.org/monsanto-papers/>> (accessed 24 December 2020).
- (iii) the EPA, the California Office of Environmental Health Hazard Assessment and the European Parliament, have been aware of some or all of the allegations contained in the Reply in respect of alleged ghost-writing and alleged manipulation of the state of scientific knowledge since at least 1 August 2017;

### Particulars

Letters from R Brent Wisner Esq, Michael L. Baum Esq., and Pedram Esfandiary, Esq. (Baum, Hedlund Aristei Goldman, Consumer Attorneys) dated 1 August 2017 to (a) Bart Staes, Heidi Hautala, Benedek Javor, and Michel Rivasi, members of the European Parliament, (b) Arther A. Elkins, then Inspector General (EPA) and (c) 'whom it may concern' at the Office of Environmental Hazard Assessment (OEHHA).

- (iv) since the '*Monsanto Papers*' have come into the public domain commencing from 2017, the EPA, Health Canada and the European Food Safety Authority have affirmed their existing assessments in respect of the carcinogenicity of glyphosate.

### Particulars

- (1) Environmental Protection Agency, Glyphosate: Interim Registration Review Decision, dated 22 January 2020.
  - (2) Statement from Health Canada on Glyphosate dated 11 January 2019 re-affirming Re-evaluation Decision RVD2017-01, Glyphosate dated 28 April 2017 available at: <<https://www.canada.ca/en/health-canada/news/2019/01/statement-from-health-canada-on-glyphosate.html>> (accessed 18 December 2020).
  - (3) Statement from the European Food Safety Authority (**EFSA**) dated 23 May 2017 titled '*EFSA statement addressing stakeholder concerns related to the EU assessment of glyphosate and the 'Monsanto papers'*' available at: <<https://www.efsa.europa.eu/sites/default/files/170523-efsa-statement-glyphosate.pdf>> (accessed 18 December 2020)
- (v) on 23 May 2017 the European Food Safety Authority issued a statement entitled '*EFSA statement addressing stakeholder concerns related to the EU assessment of glyphosate and the 'Monsanto papers'*' which stated in part that '*the recent publication of internal emails by Monsanto in relation to glyphosate (the so-called 'Monsanto papers')*' has given rise to concerns from some stakeholders and reports in some media that industry improperly influenced the EU

*assessment of glyphosate, both with regards to the scientific studies used in the assessment and with regards to those who participated in the process. The nature of the information contained within the ‘Monsanto papers’ was serious enough for EFSA to investigate their significance in relation to the EU assessment of glyphosate. Following this investigation, EFSA can confirm: that there are no grounds to suggest that industry improperly influenced the EU assessment of glyphosate; and that the role of industry and of other actors in the process was carried out according to standard procedures.’*

### **Particulars**

Statement from the European Food Safety Authority (**EFSA**) dated 23 May 2017 titled *‘EFSA statement addressing stakeholder concerns related to the EU assessment of glyphosate and the ‘Monsanto papers’* available at:

<https://www.efsa.europa.eu/sites/default/files/170523-efsa-statement-glyphosate.pdf> (accessed 18 December 2020).

- (vi) on 8 June 2017 the EFSA issued a statement titled *‘EFSA Statement regarding the EU assessment of glyphosate and the so-called ‘Monsanto papers’* regarding the EFSA’s review process in light of the Monsanto Papers. This statement stated that:
- (A) *‘There is no information contained within the ‘Monsanto papers’ or that EFSA is otherwise aware of that indicates that industry attempted to falsify or manipulate the findings and raw data of the regulatory guideline studies used in the glyphosate assessment’;*
  - (B) *‘The nature of the information contained within the ‘Monsanto papers’ and the reported allegations regarding ghostwriting were serious enough for EFSA to investigate the significance of the two identified scientific review articles in relation to the EU assessment of glyphosate [being the Kier and Kirkland 2013 Paper and the Williams 2000 Paper]. Following this investigation, EFSA can confirm that even if the allegations regarding ghostwriting proved to be true,*

*there would be no impact on the overall assessment as presented in the EFSA Conclusion on glyphosate’;*

- (C) *‘Notwithstanding the fact that these two review papers might have been ghostwritten by Monsanto, their provenance was evident from the Declarations of Interest and Acknowledgements in the papers themselves... This means that Member State and EFSA experts were under no illusion about the links between the study authors and the companies that funded or facilitated their work when the experts carried out the risk assessment.’; and*

### **Particulars**

Statement from the European Food Safety Authority (**EFSA**) dated 8 June 2017 titled *‘EFSA Statement regarding the EU assessment of glyphosate and the so-called ‘Monsanto papers’* available at [https://www.efsa.europa.eu/sites/default/files/topic/20170608\\_glyphosate\\_statement.pdf](https://www.efsa.europa.eu/sites/default/files/topic/20170608_glyphosate_statement.pdf) (accessed 18 December 2020).

- (vii) on 11 January 2019 Health Canada issued a statement in which it, inter alia, specifically addressed its consideration of the Monsanto Papers and stated:

- (A) *‘After a thorough scientific review, we have concluded that the concerns raised by the objectors could not be scientifically supported when considering the entire body of relevant data. The objections raised did not create doubt or concern regarding the scientific basis for the 2017 re-evaluation decision for glyphosate. Therefore, the Department’s final decision will stand.’*
- (B) *‘Our scientists left no stone unturned in conducting this review. They had access to all relevant data and information from federal and provincial governments, international regulatory agencies, published scientific reports and multiple pesticide manufacturers. This includes the reviews referred to in the Monsanto Papers... To help ensure an unbiased assessment of the information, Health Canada selected a*

*group of 20 of its own scientists who were not involved in the 2017 re-evaluation to evaluate the notices of objection’.*

### **Particulars**

Statement from Health Canada on Glyphosate dated 11 January 2019 re-affirming Re-evaluation Decision RVD2017-01, Glyphosate dated 28 April 2017 available at: <<https://www.canada.ca/en/health-canada/news/2019/01/statement-from-health-canada-on-glyphosate.html>> (accessed 18 December 2020).

29. It denies the allegations in paragraph 29 and refers to and repeats paragraphs 4, 6, 9, 11, 14, 16, 19, 21, 23 to 28 above.

## **B. MONSANTO’S CONDUCT IN UNDERMINING AND INVALIDATING SCIENTIFIC RESEARCH**

### **B.1 The Scientific Outreach Plan**

30. In answer to paragraph 30, it:
- (a) denies the allegations in paragraph 30;
  - (b) says further that in or around May 1999, Monsanto developed a plan, sometimes known as the ‘*Scientific Outreach Plan*’, designed to refute challenges and present accurate information about glyphosate containing herbicide; and
  - (c) at 26 May 1999, the elements of the Scientific Outreach Plan included those described in sub-paragraphs 30(a) to 30(d) of the Applicant’s Reply.

### **Particulars**

Email from Bill Heydens to William Graham dated 26 May 1999 [McNickleProdVolThree00012111].

### **B.2 Conduct in relation to the Séralini 2012 Paper**

31. In response to paragraph 31, it:
- (a) admits that Monsanto planned and adopted a strategy for responding to the Séralini 2012 Paper;
  - (b) otherwise denies the allegations in paragraph 31; and
  - (c) says further that:

- (i) it refers to and repeats paragraphs 8, 9, 10 and 11 above; and
- (ii) no letter to the editor from Helen Cunny in response to the Séralini 2012 Paper was ever published with the journal Food and Chemical Toxicology.

### Particulars

All letters to the Editor and the response is contained at Food and Chemical Toxicology 53 (1), March 2013, pages 440 to 483.

## B.3 Conduct in relation to IARC

### B.3.1. Pre-IARC decision conduct

- 32. It admits the allegations in paragraph 32.
- 33. It answer to paragraph 33, it:
  - (a) admits the allegation in sub-paragraph (d);
  - (b) otherwise denies the allegations in paragraph 33;
  - (c) says further that:
    - (i) subject to production by the Applicant of the paper by Larry D. Kier titled '*Review of genotoxicity biomonitoring studies of glyphosate-based formulations*' published in the journal Critical Reviews in Toxicology (**Kier 2015 Paper**) and reference at trial to its full terms and effect:
      - (A) the abstract to the Kier 2015 Paper contains a statement that '*The results of the biomonitoring studies do not contradict an earlier conclusion derived from experimental genotoxicity studies that typical GBF's do not appear to present significant genotoxic risk under normal conditions of human or environmental exposures*';
      - (B) the Kier 2015 Paper was initiated by Monsanto Company prior to the evaluation of glyphosate carcinogenicity by IARC;
      - (C) the Declaration of Interest in the Kier 2015 Paper disclosed that the author was a paid consultant for the Kier 2015 Paper; and

### Particulars

The Kier 2015 Paper contains a declaration of interest which states *'Larry Kier is a paid consultant of the Monsanto Company for the preparation of this review. Larry Kier is also a past employee of Monsanto Company. Monsanto Company was the original producer and marketer of glyphosate formulations. The author has not participated in any legal or regulatory proceedings in the past 5 years concerning the class of compounds that is the subject of this review that has drawn on material presented in the review paper. The author had sole responsibility for the writing and content of the paper and the interpretations and opinions expressed in the paper are those of the author and may not necessarily be those of Monsanto Company.'*

- (ii) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Kier 2015 Paper by Larry D. Kier.

34. In answer to paragraph 34, it:

- (a) does not know and therefore cannot admit whether the Kier 2015 Paper was promoted by the journal Critical Reviews in Toxicology or, if it was, how it was promoted;
- (b) otherwise denies the allegations in paragraph 34 and says further that:
  - (i) a summary of the Kier 2015 Paper was drafted by David Saltmiras (**Draft Kier Summary**) and the Draft Kier Summary was provided to Charles Whalley, then the Managing Editor of Medicine & Health Journals at Taylor & Francis Group by Roger McClellan, editor of the journal Critical Reviews in Toxicology on 19 February 2015 for use in promoting the Kier 2015 Paper;

### Particulars

Email from Roger McClellan to Charles Whalley dated 19 February 2015 [MONGLY01087281].

- (ii) subsequent to the Draft Kier Summary, Kier drafted and provided an alternate summary of the Kier 2015 Paper to Charles Whalley on 20 February 2015; and

**Particulars**

Email from Larry Kier to Charles Whalley dated 20 February 2015 [MONGLY01087285].

- (iii) on 27 February 2015 Donna Farmer drafted a third iteration of the summary of the Kier 2015 Paper which was subsequently agreed with Larry Kier.

**Particulars**

Correspondence between Donna Farmer and Larry Kier dated 27 February 2015 [MONGLY01252800].

35. In answer to paragraph 35, it:

- (a) admits the allegations contained in paragraph 35; and
- (b) says further that the paper by Helmut Greim, David Saltmiras, Volker Mostert and Christian Strupp titled *'Evaluation of carcinogenic potential of the herbicide glyphosate, drawing on tumor incidence data from fourteen chronic / carcinogenicity rodent studies'* published in the journal *Critical Reviews in Toxicology* (**Greim 2015 Paper**) was also published online on 26 February 2015.

36. In answer to paragraph 36, it:

- (a) admits the allegations in subparagraphs (c), (d) and (e);
- (b) otherwise denies paragraph 36; and
- (c) says further that:
  - (i) the Greim 2015 Paper was initiated by Monsanto Company prior to the evaluation of glyphosate carcinogenicity by IARC;
  - (ii) the Greim 2015 Paper's conclusion is contained in the statement that *'The lack of a plausible mechanism, along with published epidemiology studies, which fail to demonstrate clear, statistically significant, unbiased and non-confounded associations between glyphosate and cancer of any single etiology, and a compelling weight of evidence,*

*support the conclusion that glyphosate does not present concern with respect to carcinogenic potential in humans*’;

- (iii) David Saltmiras was one of the named authors on the Greim 2015 Paper and the paper disclosed his affiliation with Monsanto Company;
- (iv) the Greim 2015 paper stated that correspondence in relation to the paper was to be directed to David Saltmiras at his Monsanto Company address;
- (v) the Greim 2015 Paper acknowledged the contribution of Monsanto Company employees to the paper; and

#### **Particulars**

The Greim 2015 Paper contains (a) a footnote to the Saltmiras authorship which states *‘Monsanto Company, 800 North Lindbergh Blvd., 63167 St. Louis, MO, USA’* (b) addresses for correspondence which are Monsanto Company physical and email addresses (c) a Declaration of Interest which included the words *‘David Saltmiras and Christian Strupp are employed by member companies of the GTF, Monsanto and ADAMA Agriculture B.V. (formerly Feinchemie Schwebda GmbH) respectively. David Saltmiras is also Chair of the Toxicology Technical Working Group of the GTF.... Monsanto Company was the original producer and marketer of glyphosate formulations’* and (d) an acknowledgement in the form *‘Special thanks go to Elizabeth Webb, Monsanto Toxicologist, for her detailed attention to document and data table formatting and as the reference library curator. Quality control and review of data transcription were valued services provided by Carrie Leigh Logan and Aparna Desai Nemali, Monsanto Quality Assurance Specialists.’*

- (vi) it denies that any involvement of Monsanto had an impact on the validity of the underlying scientific data or conclusions reached in the Greim 2015 Paper by Helmut Greim, David Saltmiras, Volker Mostert and Christian Strupp

#### **B.3.1. Post-IARC decision conduct**

37. In answer to paragraph 37:

- (a) it admits that Monsanto planned and adopted a strategy for responding to the IARC decision;
- (b) in response to sub-paragraph 37(a), it denies the allegations and says further that:
  - (i) the development of a plausibility paper was:
    - (A) an early idea developed by Monsanto in preparation for the release of the IARC decision in March 2015; and
    - (B) a precursor to what ultimately became the 2016 CRT Expert Panel Review Papers referred to in paragraph 22 of the Applicant's Reply;
- (c) in response to paragraph 37(b), it denies the allegation;
- (d) in response to paragraph 37(c), it denies the allegation and says that Monsanto Company liaised with the EPA in relation to the IARC decision and, as is usual practice, sought to support, and provide scientific information to, the EPA;
- (e) in response to paragraph 37(d), it says that in the wake of the IARC classification to provide proper context for governments and regulators around the world, so they could defend the science-based decisions reached by their respective regulatory authorities, Monsanto sought clarification from the World Health Organisation as to the basis upon which IARC reviewed published studies and specifically clarification as to whether IARC undertook a hazard assessment rather than a risk-based or weight of evidence assessment;
- (f) in response to paragraph 37(e), it says that as set out in paragraph 37(d), in seeking clarification in relation to the basis upon which IARC reviewed published studies and specifically whether it undertook a hazard assessment as opposed to a risk-based or weight of evidence approach, and in ensuring that the different hazard based approach adopted by IARC was properly understood, employees of Monsanto briefed certain staff of the EPA, the US Trade Representative, the US Department of Agriculture, the relevant state department, Health and Human Services and some members of Congress who were interested in maintaining scientific integrity, consumer confidence, international trade and safe products for farmers to use;

- (g) in response to paragraph 37(f), it admits that it briefed the senior staff of senators for the US State of Missouri requesting their assistance with obtaining the clarification referred to in paragraph 37(e) above;
- (h) in response to paragraph 37(g), it says that it was aware that a Senate Representative, Lynn Jenkins, intended to submit a statement to the Secretary of the US Department of Health and Human Services requesting that the Secretary seek the clarification from WHO that is referred to in paragraph 37(e) above;
- (i) in response to paragraph 37(h), it denies the allegation and refers to and repeats paragraphs 20 and 21 above; and
- (j) in response to paragraph 37(i), it denies the allegation and refers to and repeats paragraphs 22 to 29 above.

38. It denies the allegations in paragraph 38 and refers to and repeats paragraphs 28 and 30 to 37 above.

#### **MONSANTO'S CONDUCT IN FAILING TO UNDERTAKE TESTING OR UNDERTAKE ADEQUATE TESTING**

39. It admits paragraph 39.

40. In answer to paragraph 40 it:

- (a) admits that it received:
  - (i) a report from Professor Parry dated 11 February 1999 which is MONGLY01312093 at MONGLY01312094 to MONGLY01312104 (**First Parry Report**);
  - (ii) a further report from Professor Parry dated 18 August 1999 which is MONGLY01314233 at MONGLY01314270 to MONGLY01314283 (**Second Parry Report**); and
  - (iii) a further report from Professor Parry dated in or around October 1999, which is in two parts, being (a) a report titled '*Evaluation of the potential genotoxicity of Glyphosate, Glyphosate mixtures and component surfactants*' which is MONGLY01314233 to MONGLY01314263 and (b) a report titled '*Key issues concerning the potential genotoxicity of glyphosate, glyphosate formulations and surfactants; recommendations for future work*' which is

MONGLY01314233 at MONGLY01314264 to MONGLY01314267  
(Third Parry Report);

- (b) says that it refers to the First Parry Report, the Second Parry Report and the Third Parry Report together as defined above as the **Parry Reports**;
- (c) does not know which part or parts of MONGLY01314233 the Applicant says is the Second Parry Report or the Third Parry Report, or what further or additional '*Parry Reports*' are relied upon; and
- (d) therefore otherwise does not know and therefore does not admit the allegations in paragraph 40 until the Applicant identifies which parts of MONGLY01314233 are said by him to be the Second Parry Report and the Third Parry Report.

41. In answer to paragraph 41, it:

- (a) refers to and repeats paragraph 40(a) above;
- (b) denies paragraph 41 and says further that:
  - (i) subject to production by the Applicant of the First Parry Report and reference at trial to its full terms and effect, the First Parry Report [MONGLY01312093 at MONGLY01312094 to MONGLY01312104] stated, among other things that '*The overall data provided by the four publications provide evidence to support a model that Glyphosate is capable of producing genotoxicity both in vivo and in vitro by a mechanism based upon the production of oxidative damage. If confirmed, such a mechanism of genetic damage would be expected to be produced at high concentration of the herbicide and would be relevant only when the anti-oxidant protective mechanisms of the cell are overwhelmed. Thus I would conclude that if the mechanism of action can be proved to be based upon oxidative damage then hazard and risk assessment could be based upon a non-linear model with a threshold of activity at low doses*';
  - (ii) all of the studies considered by the First Parry Report contained deficiencies in their methodology; and
- (c) otherwise relies on each of the Parry Reports for their full terms and effects.

42. In answer to paragraph 42, it:

- (a) refers to and repeats paragraphs 40(a), 40(c) and 40(d) above;

- (b) otherwise does not know and therefore cannot admit the allegations in paragraph 42; and
- (c) further says that:
- (i) the first part of the Third Parry Report as defined in paragraph 40(a)(iii) above and titled *'Evaluation of the potential genotoxicity of Glyphosate, Glyphosate mixtures and component surfactants'* [MONGLY01314233 to MONGLY01314263] contained the following statements:
- (A) *'These studies provide some evidence that glyphosate may be capable of inducing oxidative damage under both in vitro and in vivo conditions';*
- (B) *'These studies provide some evidence that Roundup mixture produces DNA lesions in vivo, probably due to the production of oxidative damage';*
- (C) *'2) There is published in vitro evidence that glyphosate is clastogenic and capable of inducing sister chromatid exchange in both human and bovine lymphocytes...';*
- (D) *'11) Glyphosate induced G6PD activity in both bovine and human lymphocytes... and the production of 8-OHdG in mouse liver... Both observations indicate that glyphosate may be capable of inducing a pro-oxidant state leading to the formation of the oxidative damage lesion 8-Ohdg';*
- (E) *'12) A roundup mixture containing glyphosate was shown to produce 8-OhdG in both liver and kidneys of mice... These observations indicate the Roundup mixture is capable of producing oxidative damage in vivo';*
- (F) *'The studies of Bolognesi et al (1997) suggests that glyphosate mixtures may be capable of inducing oxidative damage in vivo'; and*
- (G) *'On the basis of the study of Lioli et al (1998a and 1998b) I conclude that glyphosate is a potential clastogenic in vitro. The study of Bolognesi et al. (1997) indicates that this clastogenic activity **may** be reproduced in vivo in somatic cells [emphasis in original]. However the dominant lethal*

*assay (of limited sensitivity) indicates that this genotoxic activity is not reproduced in germ cells. The work of Bolognesi et al (1997) and Lioli et al (1998a and 1998b) suggests that the genotoxicity may be derived from the generation of oxidative damage in the presence of glyphosate'; and*

(d) otherwise relies each of the Parry Reports for their full term and effect.

43. In answer to paragraph 43, it:

(a) refers to and repeats paragraphs 40(a), 40(c) and 40(d) above;

(b) otherwise does not know and therefore cannot admit the allegations in paragraph 43; and

(c) says the Second Parry Report as defined above [MONGLY01314233 at MONGLY01314270 to MONGLY01314283], contains the following statements:

(i) *'The published information on glyphosate and its formulations provide some evidence for genotoxic activity';*

(ii) *'The overall results of the studies are combined together in Table 2. This table illustrates that in none of the studies evaluated was there evidence that glyphosate had genotoxic potential. However there are a number of deficiencies in the studies provided...'; and*

(iii) *'There was no evidence in any of the studies evaluated that the various surfactants used in glyphosate formulations were potential genotoxins';*

(d) otherwise relies on each of the Parry Reports for their full terms and effects.

44. In answer to paragraph 44, it:

(a) refers to and repeats paragraph 40 above; and

(b) otherwise admits that the Parry Reports as defined above contained recommendations of further testing, evaluation and provision of data, including with respect to testing of glyphosate and glyphosate based formulations and relies on each of the Parry Reports for their full terms and effects.

45. In answer to paragraph 45, it:

(a) denies paragraph 45;

(b) says further that it was unnecessary to perform all the tests, evaluation or provision of data recommended by Professor Parry because:

- (i) at the time the recommendations were made it had already performed numerous studies recommended by Professor Parry;
- (ii) after the recommendations were made by Professor Parry, Professor Parry subsequently indicated to Monsanto Company that some of the recommended testing was no longer necessary;

**Particulars**

Email from Richard Garnett to Donna Farmer, William Heydens, Mark Martens and William Graham dated 16 February 2001 [MONGLY02626553].

- (iii) in any event, it undertook such testing as recommended by Professor Parry that it considered necessary and appropriate and in the form that it considered most effective to elicit the information sought by Professor Parry;
- (iv) provided such further data to Professor Parry as it considered necessary and appropriate in order for him to address all of the actions he recommended; and

**Particulars**

A list of the testing and studies responsive to the recommendations contained in paragraph 44 (both those commenced before and after the recommendations made by Professor Parry) is **McNickleProVolThree00005432**.

- (v) Professor Parry ultimately agreed with Monsanto Company that glyphosate is not genotoxic and that the finding of oxidative stress in certain studies was an '*artefactual effect*' and did not demonstrate the mutagenicity of glyphosate, and no longer requested any studies on the final formulation.

**Particulars**

Meeting with Professor Parry on 15 February 2001 as recorded in an email from Richard Garnett to Donna Farmer, William Heydens and Mark Martens of 16 February 2001 [MONGLY02626553]

- (c) otherwise relies on each of the Parry Reports for their full terms and effects.

46. It denies the allegation in paragraph 46 and says further that in 2002 Monsanto contracted with the Netherlands Organization for Applied Scientific Research (**TNO**) to conduct an experiment on *in vitro* percutaneous absorption of Roundup formulations MON 35012 and MON 0139 through viable rat skin membranes (**TNO Experiment**).
47. In answer to paragraph 47, it:
- (a) says an unaudited draft report named '*In vitro percutaneous absorption study with [14C]glyphosate using viable rat skin membranes*' (**TNO Draft Report**) was sent to a representative of Monsanto Europe SA-NV; and
  - (b) otherwise denies the allegation in paragraph 47.
48. In answer to paragraph 48, it:
- (a) says that:
    - (i) at trial it will refer to the full terms and effect of the TNO Draft Report;
    - (ii) the Roundup formulation MON 0139 70% was composed of the isopropylamine salt of glyphosate (ca. 62% w/w) and water (ca. 38%); and
  - (b) otherwise admits the allegations in paragraph 48.
49. It denies the allegations in paragraph 49 and says further that:
- (a) on 29 March 2002 Monsanto Europe SA-NV received the preliminary results of the TNO Experiment which showed between 5% and 10% dermal penetration of glyphosate in MON 35012 concentrate, and around 2% dermal penetration for the MON 35012 spray dilution;
  - (b) on 29 March 2002, a representative of Monsanto Europe SA-NV sent an email to other Monsanto employees indicating that:
    - (i) the preliminary results of the TNO Experiment suffered from very bad reproducibility which TNO could not explain; and
    - (ii) TNO proposed to repeat the TNO Experiment in parallel with the human skin study;

### **Particulars**

Email from a representative of Monsanto Europe SA-NV to other Monsanto employees dated 29 March 2002 [MONGLY03738295] which says in part: '*Preliminary results with rat skin are not*

*acceptable (see fax); due to very bad reproducibility that TNO cannot explain, they proposed to repeat the study in parallel with the human skin study...'*

- (c) on 4 April 2002, a representative of Monsanto Europe SA-NV sent an email to other Monsanto employees indicating that the TNO Experiment had been stopped.

#### **Particulars**

Email from a representative of Monsanto Europe SA-NV to other Monsanto employees dated 4 April 2002 [MONGLY03737014].

50. In answer to paragraph 50:

- (a) it denies the allegations in paragraph 50;
- (b) it refers to and repeats paragraphs 48 and 49 above;
- (c) it otherwise says that:
- (i) on 2 July 2002, notwithstanding that the TNO Experiment had been stopped, a representative of Monsanto Europe SA-NV circulated the TNO Draft Report to Monsanto employees;
- (ii) on 14 July 2002, following receipt of the TNO Draft Report, Donna Farmer sent a reply email to the representative of Monsanto Europe SA-NV indicating that:
- (A) it was her understanding that its integrity had been compromised and Monsanto agreed to terminate the study; and
- (B) she wanted to see no more than a one page summary of the TNO Experiment indicating the above and that it had been terminated;

#### **Particulars**

Email from Donna Farmer to a representative of Monsanto Europe SA-NV dated 14 July 2002 [MONGLY00888421].

- (iii) a formal report was unnecessary because:
- (A) the TNO Experiment was experimental in nature;
- (B) the TNO Experiment had failed;

- (C) the TNO Experiment was deficient in a number of ways, including that:
- (1) it suffered from poor reproducibility;
  - (2) the dermal penetration results for the concentrated formulation were anomalous when compared with the diluted formulation;
  - (3) the recoveries were poor; and
  - (4) there was high variation within the glyphosate test groups.

51. In answer to paragraph 51, it:

- (a) denies the allegations in paragraph 51;
- (b) says further that:
  - (i) it did not, nor was it required to, undertake a repetition of the two-year carcinogenicity study on mice conducted in 1983, referred to in subparagraph (a) of the Applicant's Reply, and says further that:
    - (A) on 10 November 1988, following a meeting between representatives of the United States Environmental Protection Agency (**EPA**) and Monsanto, the EPA decided to reconsider their interpretations of the mouse study, and requested that Monsanto provide additional historical data, which was provided;

#### **Particulars**

Letter from Monsanto to the EPA dated 12 December 1988 [MONGLY01287148].

- (ii) on 6 July 1989, after reviewing the additional historical data on the mouse study, the EPA wrote to Monsanto saying, among other things, that '[a] *repeat of the mouse oncogenicity [study] will not be required at this time*' and that '*after the results of the new 2-year rat chronic toxicity and oncogenicity study are reviewed, the Agency will reconsider if a repeat mouse oncogenicity study is needed*';

### Particulars

Letter from Monsanto to the EPA dated 6 July 1989, page 2 [McNickleProdVolThree00016442].

- (iii) on 26 September 1990, Monsanto completed and submitted to the EPA a two-year rat study;

### Particulars

Study dated 26 September 1990 titled '*Chronic Study of Glyphosate Administered in Feed to Albino Rats*' [McNickleProdVolFive00097185].

- (iv) in or around June 1991, the EPA's Toxicology Branch recommended the carcinogenic potential of glyphosate be addressed by the EPA's Peer Review Committee, based on a high incidence of pancreatic islet cell tumours in each of the treated male groups the two-year rat study;

### Particulars

Facsimile from Dr Sheila Schuette to Dr William Heydens attaching EPA review of the two-year rat study [MONGLY01287106].

- (v) on 30 October 1991, after reviewing the two-year rat study and other material submitted to the EPA, the EPA's Peer Review Committee concluded that '*glyphosate should be classified in the lowest cancer classification as a Group E chemical (evidence of non-carcinogenicity for humans)*';

### Particulars

EPA's memorandum regarding the second peer review of glyphosate [MONGLY02448773].

- (c) it did not, nor was it required to, undertake a 12-month or longer chronic toxicity study on glyphosate after 1991, as referred to in sub-paragraph (b) of the Applicant's Reply;
- (d) it did not, nor was it required to, undertake long term animal carcinogenicity studies on any formulated pesticide product, as referred to in sub-paragraph (c) of the Applicant's Reply, and says further that:

- (i) the EPA does not require long-term animal carcinogenicity studies to be conducted on formulated glyphosate-containing products;
- (ii) component parts of Monsanto Roundup Products, in particular glyphosate and surfactants, have been analysed by the EPA and have been found not to be carcinogenic;

**Particulars**

- (1) 2017 EPA OPP Report [McNickleProdVolThree00017888] at 143-144.
  - (2) EPA's memorandum regarding Alkyl Amine Polyalkoxylates (surfactants) (April 3, 2009) [McNickleProdVolThree00002181].
  - (3) Alkyl Amine Polyalkoxylates; Exemption from the Requirement of a Tolerance, 74 Fed. Reg. 28616 (June 17, 2009) [McNickleProdVolEight00004576] at 28619.
- (e) epidemiological studies have been conducted to study the association between glyphosate containing formulations and NHL, and have found no association between glyphosate use and NHL overall or any NHL subtypes; and

**Particulars**

- Gabriella Andreotti et al., 'Glyphosate Use and Cancer Incidence in the Agricultural Health Study,' JNCI J. Nat'l Cancer Inst. 110(5) (2018) 509-16 (**Andreotti et al. 2018**) [McNickleProdVolTwo00008268].
- (f) since 1999, various further studies, epidemiologic research and/or agricultural chemical exposure assessments have been conducted, including:
- (i) Andreotti et al. 2018, in respect of which:
    - (A) enrolments into the study had commenced from around 1993 to 1997 (involving the completion of a questionnaire as to use of glyphosate based herbicides and other pesticides); and
    - (B) follow-up phone interviews with participants were being conducted from around 1999 to 2005;

- (ii) the Farm Family Exposure Study authored by John Acquavella and others, which was published in 2004.

### **Particulars**

Acquavella, J. et al., '*Glyphosate biomonitoring for farmers and their families: results from the Farm Family Exposure Study*,' 2004, *Env. Health Perspect* 112, pp. 321-326 [McNickleProdVolFive00073109].

- (g) some toxicology studies conducted by IBT in or around 1970 to 1974 in respect of glyphosate were determined to be invalid by the EPA, but:
    - (i) it denies anything done by Monsanto caused the invalidity; and
    - (ii) it says further that;
      - (A) the toxicology studies which had been determined to be invalid by the EPA, and which the EPA had requested Monsanto to repeat, were repeated;
      - (B) the results of each repeated toxicology studies were consistent with the results of the studies conducted by IBT in or around 1970 to 1974 to the effect that no carcinogenic effects of glyphosate were found; and
      - (C) there is currently no IBT generated data used anywhere in the world to support glyphosate registration.
52. It denies the allegations in paragraph 52 and repeats paragraphs 39 to 51 above.
53. It admits the allegations in paragraph 53, and says further that it was under no obligation to provide either the TNO Draft Report (which was a draft report, and related to an experimental study which had failed) or the Parry Reports (which were summary reviews of existing publicly available studies and data) to regulatory authorities or to make them publicly available.
54. It denies the allegations in paragraph 54 and repeats paragraphs 39 to 51 above. It says further to the extent that it held information which was not shared with regulatory authorities, such information was:
- (a) in respect of the Parry Reports, an analysis of studies which were available to regulators; and
  - (b) in respect of the TNO Experiment, experimental, inconclusive and suffered from the deficiencies in paragraph 50 above.

55. It denies the allegations in paragraph 55 and repeats paragraphs 3 to 54 above.
56. In answer to paragraph 56, it:
- (a) says that it refers to and repeats paragraphs 35(d)(iii) of the Defence;
  - (b) otherwise does not plead to paragraph 56(a) and 56(c) as they make no allegations against it;
  - (c) insofar as paragraph 56(b) raises allegations against it, refers to and repeats paragraphs 28 and 38 above and otherwise denies the allegations in paragraph 56(b).
57. In answer to paragraph 57, it:
- (a) refers to and repeats paragraphs 35(d)(iv) and 35(vi)(G) of the Defence;
  - (b) does not plead to paragraphs 57(a) and 57(c) as they make no allegations against it; and
  - (c) insofar as paragraph 57(b) raises allegations against it, refers to and repeats paragraphs 28 and 38 above and otherwise denies the allegations in paragraph 57(b).
58. Save to say that it refers to and repeats paragraphs 35(h), 48(c)(iii)(A), 48(f)(i)(E) and 61(c) of the Defence and paragraphs 3 to 55 above, it does not plead to paragraph 58 as the Applicant makes no allegations against it.
59. It says further, that as the paragraphs 3 to 55 of the Reply are pleaded responsively to the allegations of scientific knowledge pleaded in paragraph 35(d)(ii) of the Defence, the allegations in paragraphs 3 to 55 of the Reply (if proved) are irrelevant to:
- (a) the state of scientific knowledge prevailing at any time prior to each of the allegations made; and
  - (b) the claims made by any group member exposed to glyphosate or Roundup Products in the time prior to the period traversed in paragraphs 3 to 55 of the Reply.
60. Save for any positive admissions in the Reply or in the Rejoinder above, the Third Respondent joins issue with each and every allegation in the Reply.

Lawyer for the Third Respondent

This pleading was prepared by Herbert Smith Freehills, solicitors for the Third Respondent, and Anna Robertson, counsel for the Third Respondent, and settled by Robert Craig QC for the Third Respondent.

Date: 24 December 2020

Certificate of lawyer

I, Peter Mark Butler AM RFD, certify to the Court that, in relation to the rejoinder filed on behalf of the Third Respondent, the factual and legal material available to me at present provides a proper basis for:

- (a) each allegation in the pleading; and
- (b) each denial in the pleading; and
- (c) each non admission in the pleading.

Date: 24 December 2020
